SUMMARY

I am a Mathematics (Computer Science) fresh graduate from Institut Teknologi Sepuluh Nopember with a strong foundation as an AI and Data Science across end-to-end machine learning lifecycles from data exploration to model deployment. Skilled in Python and SQL with software visualization like Tableau and Power BI. I have developed Data Science Agents for increasing performance and efficiency for the data pipeline process. Proficient in AI and Data Science projects with experience from competition and IT Consulting including, natural language processing, computer vision, multi criteria decision analysis, LLM, RAG, and backend systems.

EDUCATION

S-1 Matematika – Institut Teknologi Sepuluh Nopember

Surabaya, East Java

Bachelor of Mathematics (Computer Science), Faculty of Science and Data Analytics, cGPA: 3.38/4.00 2022-2026

- Relevant Coursework: Data Science, Data Mining, Introduction to Machine Learning, Cloud Computing, Web Application, Science Computation, Digital Image Processing, Database Technology.
- Final Thesis: Hyperparameter Optimization on Tree-based Models using Genetic Algorithm for Predicting Revenue of SMS International Services

International Experience

Global Project Based Learning ITS – SIT 2024 Data Science in Japan – Tokyo Japan

Member

September

2024

- Make a time series project to predict sales with data science techniques.
- Learn to work together with international students.
- Got the 3rd rank from all teams with collaboration between Indonesian and Japanese students.

WORK EXPERIENCES

GDP Labs (Djarum GDP's Venture)- Surabaya, Indonesia

February–August 2026

AI Engineer Intern

- Built an end-to-end Agentic AI for Data Science, reducing project turnaround time by 90% from 30 days to 1 week, leveraging approaches from OpenClaw, OpenManus, loop engineering, harness engineering, and autoresearch.
- Built two Data Science Agent frameworks for forecasting and anomaly detection, improving performance by 95% and reducing token usage by 80%.
- Built and deployed a facial recognition spoof detection system covering 10+ spoofing cases and containerized with Docker for model serving and inference, reducing APCER and BPCER failures by 96%.
- Built 20+ english documentation projects for presenting to other developers and engineers.

PT DIVUSI – Bandung, Indonesia

January–February 2025

Data Scientist Intern

- Analyzed supply and demand datasets across 34 provinces and 514 cities/regencies in Indonesia, sourced from BUMN company and international enterprises.
- Developed and A/B tested tree-based forecasting models (Random Forest, XGBoost) for 12-month supply-demand prediction, reducing RMSE by 89%.
- Designed interactive dashboards with Streamlit to visualize correlation analysis and delivered strategic recommendations to stakeholders.

Avalon AI – Surabaya, Indonesia

December 2024–November 2025

Data Scientists Lead

- Developed a stateless HTTP backend service for Maps Lead AI, commissioned by Boring AI, to generate business leads based on criteria like business type, location, and reviews. Built five HTTP POST endpoints, integrated with the Workflow Executor and utilized Google Maps, SearchAPI.io, and OpenAI APIs for search, scraping, and review analysis, ensuring precise lead scoring.
- Leading a team of startups to delegate in data science competitions and successfully winning more than 10 championships at the national level.

Institut Teknologi Sepuluh Nopember – Surabaya, Indonesia

August–September 2024

Course Assistant, Programming and Computer Algorithm

- Guided 30+ students through foundational programming and algorithm concepts.
- Author learning modules, presentations, and practice quizzes for hands-on labs.

ORGANIZATIONAL EXPERIENCES

Google Developer Group on Campus ITS – Surabaya, Indonesia

October 2024–August 2025

Machine Learning Lead

- Contributed to the development of a one-month machine learning mini bootcamp and learning curriculum for beginner to intermediate learners, focusing on supervised and unsupervised learning in machine learning concepts.
- Become a speaker for delivering material about introduction to machine learning with coding sessions for over 100 participants, incorporating real-world case studies to enhance applied learning and foster a collaborative tech community.

IEEE ITS Student Branch – Surabaya, Indonesia

February 2024–January 2025

Academics Lead

- Researched and wrote articles on emerging technology trends for IEEE ITS Student Branch's magazine, helping members stay informed on developments in AI, smart electrical systems, and IoT
- Formed partnerships to bring in overseas speakers and drive 60-attendee international forums.
- Coordinated an international scientific writing seminar with faculty and global speakers.

PROJECT

Docs Q n A (2026) [code](#)

- A NotebookLM-style AI tool that creates isolated notebooks and chat with an AI that answers grounded in those sources only (PDF, pasted text, web URLs). Four user-triggered agents extend this: Summarize, Analysis Report, a Research agent that finds related academic papers, and a math agent that produces mathematical write-ups of a paper's content. This project adapted with Andrej Eng agent design pattern.

Content Engagement Analysis (2025) [code](#)

- End-to-end project from data scraping to dashboard for analyzing video reels Instagram with many sentiments. Data scrapping using Whisper Model, embedding model using TF-IDF Bigram, Sentiment Classification using Logistic Regression with hyperparameter tuning, and dashboard using Next JS. This project got the Top 5 for Satria Data Big Data Competition by Ministry of Education.

G-maps Analytics (2025) [code](#)

- An API service that collects business data from Google Maps, analyzes that information using OpenAI, and provides insights regarding strengths, weaknesses, and alignment with specific criteria. This project has collaborated with Boring AI (Start-up from Japan) and successfully has funded 3.5 million.

SPEAKER

- CPRO (Sentiment Analyst with Natural Language Processing) 2024 - Himatika ITS
- Mini Webinar (Data Science in Business Application) 2026 - Himasakta ITS
- Build with AI (Navigating the New Era of AI Production) 2026 - GDGoC ITS

AWARDS

- [National] 5th Winner Big Data Challenge Satria Data 2025 – Kemenristekdikti
- [National] Top 20 Pertamina Early-Stage Startup Competition 2025 – PT Pertamina
- [National] PKM-KC (Program Kreativitas Mahasiswa Bidang Karya Cipta) 2023 – Funded by Kemenristekdikti
- [National] Top 5 GAMMAFEST Data Science Competition 2024 – Himpunan Mahasiswa Statistika IPB
- [National] Selected Team Representative from ITS, Data Mining Category Gemastik - Kemenristekdikti
- [International] TOP 3 GPBL Data Science Projects in Japan 2024 – Mathematics Department ITS and Computer Science Major SIT Japan

CERTIFICATION

- [AI Engineer for Data Scientist Associate Certification from Datacamp](#) April 2025
- [Microsoft Office Specialist: Data Analytics from Microsoft](#) September 2025
- [Fundamentals of Deep Learning Certificate from NVIDIA](#) September 2025
- [SQL Advance Certificate from Hackerrank](#) July 2024

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript

AI & Machine Learning: NLP, Computer Vision, LLM, RAG, Predictive Analytics, Deep Learning

Framework & Libraries: Numpy, Pandas, Tensorflow, Keras, Pytorch, LangChain, LangGraph, Scikit-learn, NLTK

Development Tools: Git, Docker, Grafana, Prometheus, Linux, GCP, FAST API's, HuggingFace

Data Engineering: ETL, Data Pipeline, Data Preprocessing

Data Visualization Tools: Excel, Google Looker Studio, Tableau

Development Practices: TDD, SDD, Clean Code, Event-Driven

AI Integration Skills: Claude Code, Codex, Opencode

Collaboration & Productivity Tools: Notion, Google Workspace, Discord
